Subject: RE: City of Alexandria Combined Sewer System Long Term Control Plan

I strongly urge the Virginia Department of Environmental Quality to approve a new Long Term Control Plan (LTCP) for the City of Alexandria's combined sewer system that contains explicit plans for meeting the Environmental Protection Agency's (EPA) rules for sewer discharge AND includes plans for eliminating sewage discharge into Oronoco Bay from CSO 001.

It is unacceptable that the city's proposed LTCP will allow continued dumping of untreated sewage containing E. coli and other pathogens, into Oronoco Bay and the Potomac for decades to come. Please ensure the city's LTCP incorporates EPA water quality protection standards for the embayment.

In addition, I urge VDEQ to immediately establish a water quality monitoring program for Oronoco Bay. I would appreciate a response to my request.

Sincerely,

Stephen Gwyn
